**STAT** utilizes photo-catalytic oxidation technology that generates advanced oxidation products (AOP's), primarily consisting of hydroperoxides, or vaporized hydrogen peroxide. Photo catalytic oxidation technology replicates nature's purifying process through the use of ultraviolet energy to activate a multi-metal catalyst, converting water vapor into oxidizers including peroxide and hydroxyls. These oxidants will either inactivate the microbe by the process of cell lysing which compromises the cellular integrity by oxidation penetrating the cell wall, or by changing the molecular structure rendering the contaminant harmless.

This Enhanced Cluster Ion (ECI) STAT unit now produces well in excess of 2 Million Ions per CM<sup>3</sup>. This is perfect for Nursing Home rooms and Hotel rooms with PTAC units. STAT is virtually maintenance free.
